

FC-125 Adhesive: Safe for direct food contact

Those tiny labels on fruits and vegetables carry important information. And to make sure the produce stays as healthy as it is when it leaves the farmer's hands, it is vital the label manufacturer maintains their responsibility for providing a product that meets specific FDA regulations. Ensuring proper standards of non-toxicity for both the facestock and adhesive are critical for direct food contact applications.

Spinnaker's FC-125 adhesive, paired with 40# Semi Gloss, meets FDA requirements for direct contact with fruit and vegetable skins. The combination provides a construction that not only prints and die cuts well, but that adheres to the various textures inherent in the food surfaces.

40# Semi Gloss / FC-125 meets FDA requirements 21 CFR 176.170 and 176.180 for facestocks and 21 CFR 175.125(b)(2) for adhesives.

Construction available Trimless with a minimum single roll order of 3" x 5,000'
