

Frozen Food Label

Frozen food labeling can be challenging. You contend with varnished paperboard, flexible packaging, clamshells, and waxed corrugate. Applications that are blast frozen or applied in freezer conditions. Labels placed directly on the food packaging or on the boxes used to distribute the product. Your label needs to work—even if it's an irregularly-shaped package with frost or moisture on it. Fortunately, Spinnaker has Frostbite™, an adhesive specifically designed for these demanding substrates and their environments.

Popular items for this market:

60# Premium Semi Gloss / Frostbite / 40#
 ScanTherm™ Ultra / Frostbite / 40#
