

WHITE VOID POLYESTER

Looking for a tamper evident label that really leaves its mark? SafeTE™ White Void Polyester leaves the word VOID diagonally on the substrate and label when removed. This material is paired with SFA, an acrylic adhesive specifically designed for film facestocks; it offers high ultimate adhesion to a wide variety of substrates, including high and low surface energy surfaces. Void Polyester can be printed thermal transfer and flexo with excellent results. When you must have proof that your product is safe and in its original form, White Void Polyester leaves no doubt.

For other options in the SafeTE line of tamper evident products, visit spinps.com.
